Art-Unit: 3737

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 12-18, drawn to calibration mapping process and surgical microscope, classified in class 600, subclass 407.
- II. Claim 23, drawn to a navigation system tracking marker, classified in class 600, subclass 300.
- 2. The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the system and process use calibration reflectors other than a conical tip contact guide.. The subcombination has separate utility such as in usages with other than a surgical miocroscope or camera calibration process.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
